

Dataset considered for story telling is student-mat.csv.

This dataset had collected to analyze the performance of the student in mathematics subject. There are many factors which affects the performance of the student, some of them which has more impact on the dataset is performance in first and second period grade. Another main reason which affects the performance is consumption of alcohol.

This image tells us that students under 17 are also consuming maximum amount of alcohol. This will results in declining the performance of the student in the subject.
